Abstract of JP 8000635 (A)

PURPOSE: To provide efficient output in a device having a coagulating function and an incising function. **CONSTITUTION:** A coagulating secondary coil 22 to generate electric power necessary for coagulation and an incising secondary coil 20 to generate electric power necessary for an incision, are provided on the secondary coil side of an output transformer 17, and are constituted so that a case where electric power is supplied to bipolar tweezers 13 from the coagulating secondary coil 23 and a case where electric power is supplied from the incising secondary coil 20 are switched to/from each other by a changeover switch 23. Thereby, output suitable for coagulation can be obtained appropriately for the coagulation, and output suitable for an incision can be obtained appropriately for the incision.
